

Rick Row joined Sustainable Silicon Valley as the Executive Director in June of 2007.

For the previous five years, he managed Global Care, an EHS initiative, in the Environment, Health and Safety Division at SEMI, a global industry association for companies providing equipment, materials and services, used to manufacture semiconductors and related technologies. CEOs of SEMI member companies could voluntarily commit their companies to improve systematically according to five principles: workplace health and safety, resource conservation, product stewardship, community service, and excellence. Rick has also worked on environmental engineering R&D projects for the electric utility industry at EPRI in Palo Alto. Earlier in his career, he consulted on innovation management, as well as held financial management and analysis positions, in the mining industry.

Rick holds a BE in chemical engineering from the University of Queensland, Australia, and an MBA in international business from Golden Gate University, San Francisco. He is a registered professional chemical engineer in California.
